#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 mont MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 11, 12, 22, 23, 32, 33, 42, 43, 52 are rejected under 35 U.S.C. 102(e)

as being anticipated by Smith, Publication #2002/0000831

Smith discloses a radio transmission device (2, Fig. 7) that will transmit data in the form of music via a Bluetooth or HomeRF protocol, [0037]. Smith discloses a data inputting means (21, Fig. 7), data storage means (2M, Fig. 1). Smith discloses that the data in storage (2M) is to be compressed to reduce storage [0043] & [0046]; a data transmitting means in the form of output stage 2O. Smith discloses a FIFO (First-In First-Out) buffer (5G).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 15, 26, 36, are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith, Publication #2002/0000831 in view of Katsuki.

Katsuki discloses a compression rate control means in Fig. 8 used in a radio frequency (RF) amplifier 63, col. 5, lines 45-46. To have similarly used Katsuki's

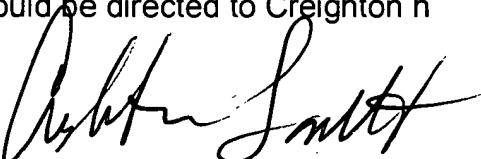

teaching of using a compression rate control means in Smith's apparatus would have been obvious to a person having ordinary skill in the art because both references are compressing digital information and transmitting via RF. The skilled artisan with these two references in front of them would have readily found the two references combinable.

Claims 2, 3, 5-10, 13, 14, 16-21, 24, 25, 27-31, 34, 35, 37-41, 44-51 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tanaka publication #2001/0041056 & sakashita et al Publication #2004/0169665
